LIST of MAPS

ALBERTA RESEARCH COUNCIL MAP RCM5 (in pocket)

Foreword

The prime objective of the three year pilot Coal Compilation Project (CCP), initiated in the 1989/90 fiscal year, is to provide coal resource maps to stimulate and support industry exploration programs, and assist government in matters of resource management. An essential feature of the program is the use of cost effective Geoscience Information System (GIS) technology that allows the database and various thematic maps to be analyzed, updated, and displayed with complete flexibility at any scale.

Each map set is intended to be a stand alone, unique product contributing to an overall synthesis of information. Maps generated can be at a regional or reconnaissance level. Collection of new data has been limited. Data compiled and evaluated has been based on the following principal sources; Alberta Research Council/Alberta Geological Survey (ARC/AGS); Energy Resources Conservation Board (ERCB); Geological Survey of Canada (GSC/ISPG); and information from the coal industry sector. Industry has cooperated and supported the CCP by providing unpublished corporate reports to the AGS. The availability of these reports has been an essential component toward the success of this project.

The CCP may encompass up to eighteen 1: 50 000 scale mapsheets, to be completed over the three year period. Nine mapsheets have been completed to date, four during the 1989/90 fiscal year and an additional five during the past 1990/91 fiscal year.

Custom maps and database searches can be obtained by contacting the Coal Geology Section, Alberta Geological Survey, Alberta Research Council. Raw coal exploration data¹ that are in the 'public' domain can, for a nominal fee, be viewed in microfiche form at the Records Center of the Energy Resources Conservation Board in Calgary, Alberta. Arrangements can also be made to acquire copies of all/selected data.

¹Specifically, the geophysical logs (and other associated data) of coal exploration drillholes and, as available, analytical data relating to coal quality.

Acknowledgments

The project was funded by the Alberta Department of Energy and the Alberta Research Council. The Alberta Geological Survey Coal Technical Advisory Sub-Committee provided valuable guidance for the project. Mike Dawson of the Geological Survey of Canada (GSC/ISPG) provided significant Upper Cretaceous/Tertiary coal subcrop information as well as trench logs and analytical data from said trenches. Wolfgang Kalkreuth, also of the GSC/ISPG, provided vitrinite reflectance measurements. Mr. D. MacFarlane, Esso Resources Canada Limited and Union Oil Company of Canada are thanked for making unpublished reports available to the Alberta Geological Survey. Conversations with Mr. B. Klappstein of Smoky River Coal Limited were also very beneficial. D. Goulet assisted with map digitization and data entry.

Introduction

Objective

The stated objective of the pilot Coal Compilation Project (CCP), initiated in the 1989/90 fiscal year, was to provide coal resource maps on a 1: 50 000 scale, which would

- o stimulate and support industry exploration programs, and
- o assist government in matters of resource management (eg, Integrated Resource Plans) in areas that may have good coal development potential, but have a lack of data or understanding.

Each map set was intended to be a stand alone, unique product contributing to an overall synthesis of information. Maps generated would be at a regional or reconnaissance level. Collection of new data and/or actual time in the field has been limited. Data compilation and evaluation has been based on the following principal sources

- o Alberta Research Council/Alberta Geological Survey (ARC/AGS)
- o Energy Resources Conservation Board (ERCB)
- o Geological Survey of Canada (GSC/ISPG)
- o cooperation from the coal industry sector.

The CCP may encompass up to eighteen 1: 50 000 scale mapsheets, to be completed over a three year pilot period. Nine mapsheets have been completed to date, four during the 1989/90 fiscal year and an additional five during the past 1990/91 fiscal year. At the end of the three year period, the CCP should be evaluated to determine if the project should be expanded and/or continued. As each map represents a complete product, the Coal Technical Advisory Subcommittee would be able to monitor the progress of the research and react to changing priorities without being committed to spending funds more than one year in advance.

Four contiguous NTS mapsheets², located within the Hinton - Grande Cache corridor, were completed during the first fiscal year (1989/90) of the CCP. During the past fiscal year (1990/91), an additional five, but still contiguous, NTS mapsheets were completed in the Grande Cache - Musreau Lake area (see Figure 1). From southeast to northwest (to north), the mapsheets are identified as 83E/16 (Donald Flats), 83L/2 (Bolton Creek), **83L/3 (Copton Creek)**, 83L/7 (Prairie Creek) and 83L/10 (Cutbank River).

For each mapsheet, a product has been generated that includes

- o a coal resource map (scale 1: 50 000)
- o 'snapshot' maps (scale 1: 250 000)
- o supplementary text.

Methodology and Discussion of GIS

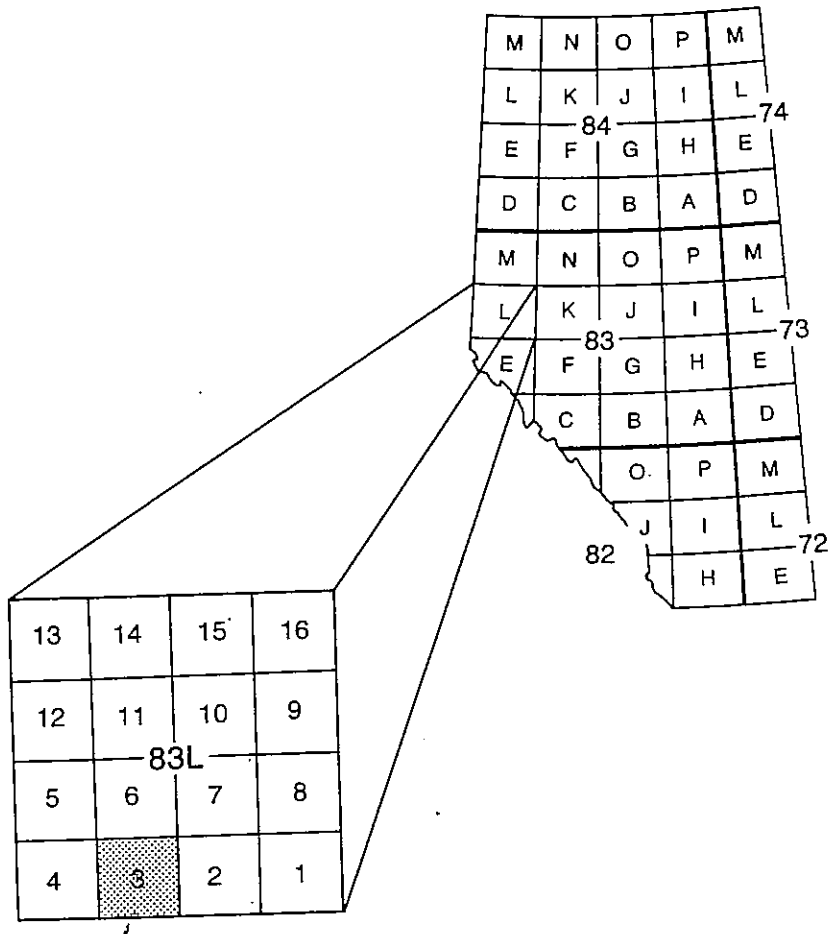

Geographic Information Systems (GIS) which encompass spacial data storage, display and analysis by computer have been employed in the municipal, environmental and forestry sectors for many years. The term GIS has been applied to mainly surface or geographic studies and has not as a rule been extended to the 3rd dimension (depth) or temporal aspects (time). A Geoscience Information System (GSIS) goes beyond what is generally thought of as traditional GIS and is focused strongly on subsurface information. An essential feature of the CCP is the use of cost effective GSIS technology that allows the database and various thematic maps to be analyzed, updated, and displayed with complete flexibility at any scale. In addition custom maps can be produced from the various data and graphic elements that have been entered into the information system.

Much of the present methodology, software and hardware used in this study is described in detail in the Alberta Research Council, Open File Report 1989-03A (Richardson et al, 1989). In general both digital and hard copy data or graphic elements are entered into a GIS software product (pcARC/INFO) where they can be analyzed, displayed or plotted to hardcopy.

During the initial year of the CCP, substantial time was spent in

²From southeast to northwest, the mapsheets are identified as 83F/5 (Entrance), 83E/9 (Moberly Creek), 83E/15 (Pierre Greys Lakes) and 83E/14 (Grande Cache).

Figure 1. Coal Compilation Project - Copton Creek NTS 83L/3 ; Location

- o developing the hardcopy, product template, and
- o replicating the above template into the electronic medium of GIS.

During the past year, much of the original design work was utilized where appropriate. There were numerous, additional design problems, not encountered in the initial year's work, which also had to be resolved. These 'new' design difficulties consumed significantly more time than was initially anticipated. As a net result, expectations of the number of CCP mapsheets generated during the fiscal year fell somewhat short of expectations.

The mapsheets completed to date have each provided their own unique design difficulties, a situation which appears to be more the norm rather than the exception. If, as expected, this pattern continues into the third year of the CCP, the number of mapsheets to be generated should be adjusted downward to reflect, and acknowledge, time spent in resolving these unique design problems.

Location and Access

The study area of mapsheet NTS 83L/3 (Copton Creek) is located in west-central Alberta between Latitudes $54^{\circ} 00'$ and $54^{\circ} 15'$ North, and Longitudes $119^{\circ} 00'$ and $119^{\circ} 30'$ West (between Townships 58 and 61 inclusive, and Ranges 7 to 10 inclusive, West of the 6th Meridian).

The community of Grande Cache (83E/14) is the primary population center near the study area.

Paved and improved access, to and within the area, is provided by Highway 40 and Secondary Highway 734. Numerous all-weather, gravelled wellsite and logging roads also exist. Additional secondary seasonal access is provided by a network of roads, trails and seismic lines.

The area is serviced by the Canadian National Railway and the Alberta Resources Railway. The rail lines have the capacity to accommodate coal unit trains. The coal terminal at Ridley Island, located at Prince Rupert, B.C., is located approximately 1300 rail-kilometers from Grande Cache; the Neptune Terminals at Vancouver, B.C. are located approximately 1150 rail-kilometers from Grande Cache.

Geological Setting

Within the mapsheet 83L/3, coal measures are deposited within thick successions of sandstones, siltstones, shales and conglomerates. Known coal-bearing sequences are contained within the

- o Lower Cretaceous Luscar Group
- o Upper Cretaceous/Tertiary Wapiti Group.

Stratigraphic nomenclature for the above strata is shown in Figure 2.

Stratigraphy of Coal-Bearing Units

Luscar Group

The Luscar Group consists of sandstones, shales, conglomerates and coals that have been deposited predominantly in nonmarine environments. The strata of the Group have been divided into four formations (Langenberg and McMechan, 1985), ie:

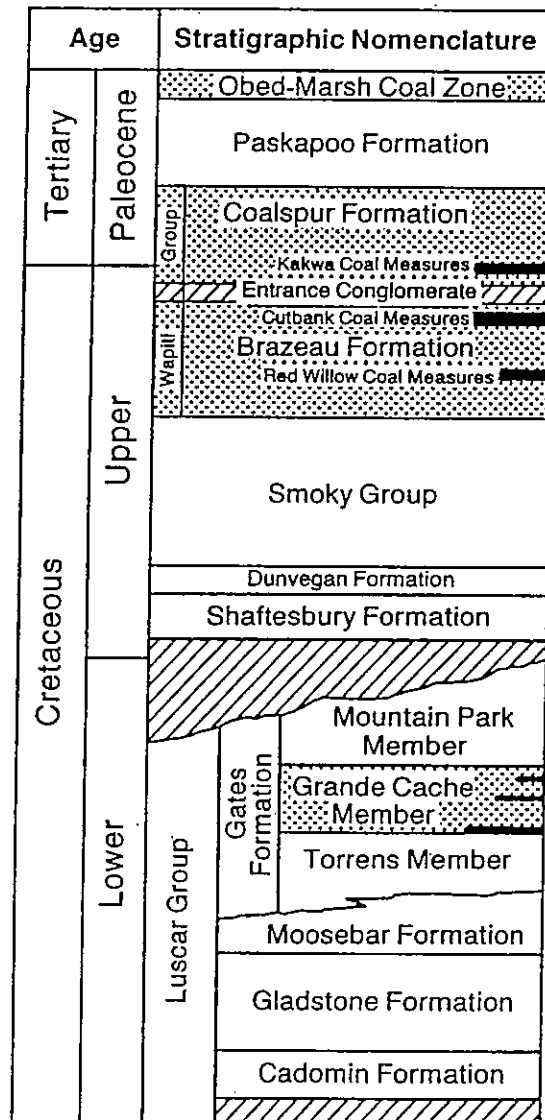

- o Cadomin Formation, a basal conglomerate
- o Gladstone Formation, predominantly nonmarine sandstones and shales
- o Moosebar Formation, marine shales and sandstones
- o Gates Formation, nonmarine sandstones, shales and coals.

Gates Formation

The Gates Formation can be divided into three members - the Torrens, Grande Cache and Mountain Park members. The Grande Cache Member contains the economic coal seams within the Luscar Group.

Within the mapsheet, up to eleven seams are present within the Grande Cache Member of the Luscar Group. The seams have an average aggregate thickness of 22 meters and are contained within a 150 meter-thick sedimentary sequence. Average seam thicknesses range from 0.9 to 8+ meters. Seam correlations are preliminary.

Figure 2. Stratigraphic Nomenclature Adopted for the Coal Compilation Project
 (after Macdonald et al 1989; and Dawson 1989 & 1990)

Legend

-  Coal-bearing unit
-  Coal Seams/Zones
-  Hiatus or missing interval

Wapiti Group

The Wapiti Group consists of primarily nonmarine sandstones, conglomerates, shales and coals; the Group lies conformably above the marine Wapiabi Formation.

The strata of the Wapiti Group have been divided into four formations (McMechan and Dawson 1990)

- o Lower Brazeau
- o Upper Brazeau; contains the sequence informally defined as the Cutbank coal measure
- o Lower Coalspur
- o Upper Coalspur; contains the sequence informally defined as the Kakwa coal measure.

Upper Brazeau Formation

Coal occurrences within the Cutbank coal measure of the Upper Brazeau Formation have, within the mapsheet, been documented in outcrop, trenches and drillholes. Within the CCP mapsheet 83L/3, there are a minimum of three coal zones present within the Cutbank coal measure. The coal zones are contained within a 60+ meter-thick sedimentary sequence. While the coal zones vary in both thickness and continuity, they have an average aggregate gross thickness of 12 meters. Gross coal zone thicknesses range from 1.8 to 5.9 meters. Net coal contained, within the three coal zones, averages 9 meters. Net coal thickness, per zone, ranges from 1.7 to 4.7 meters.

Upper Coalspur Formation

Only minor occurrences of coal outcrop and/or float have been noted in the Kakwa coal measure of the Coalspur Formation within 83L/3.

Structure

Strata of the Lower Cretaceous Luscar Group have been subjected to deformation which has produced northwesterly trending thrust faults and folds. As a result, the Luscar Group coal seams are now exposed in a series of northwest trending thrust sheets. Often the coal seams have been further locally folded and faulted. Depending on the severity of these local structural

complexities, and acknowledging a general discontinuity of coal outcrops in the Inner Foothills, coal seam correlations and evaluations can be extremely difficult.

Wapiti Group strata are contained within a series of gentle folds that trend in a northwesterly strike direction. Located in the northeastern part of the mapsheet, the strata have shallow dips, usually between 0 and 15 degrees towards the northeast.

Environmental Setting

Integrated Resource Plans (IRP's)

The southeast part of the CCP mapsheet 83L/3 is located within the Berland IRP. Willmore Wilderness Provincial Park, located in the extreme southwest corner of the mapsheet, is not contained within the Berland IRP; a separate IRP, for the Willmore Wilderness Provincial Park area, may be undertaken at some time in the future. An additional IRP, designated as 'Kakwa-Wapiti', is proposed for the future and is located, in part, in the northern half of the mapsheet.

In the January, 1991 edition of Planning in Progress (Volume 8 Number 1), the status of the Berland IRP was capsuled by the following statement...

'A planning team meeting was held November 16, 1990. At that time, the team discussed Resource Management Area boundaries and themes. As well, a planning area boundary change was approved by the Eastern Slopes Regional Management Committee. The next team meeting is scheduled for January 1991 at which time the team will discuss broad objectives and guidelines. (Team Coordinator: Jamie McNeil)'

See also Figure 3 for locations/outlines of IRP's in the surrounding vicinity. On Figure 3, a bracketed letter trails the name of the IRP; this letter identifies the status of the IRP as

- o (C); completed
- o (P); in-progress or
- o (F); future.

Resource Management

Coal Dispositions

The status of the rights_to_coal within an area can generally be categorized into one of the following

- o Crown coal lease
- o Crown coal lease under application
- o Areas with registered right of first refusal
- o Freehold coal rights
- o Coal withdrawn from disposition.

According to a recent (1989-05-09) Alberta Energy Coal Disposition Map of 83L/3 the following 4 companies are/were involved in one or more of the above activities

- o Copton Excol Ltd.
- o Esso Resources Canada Limited
- o Manalta Coal Limited
- o Seaton-Jordan & Associates Ltd.
- o Smoky River Coal Limited

It should be noted that, for the mapsheet, the corporate coal lease activity consisted of only the first two categories.

Coal lease applications, originated by Seaton-Jordan & Associates Ltd., have been recently withdrawn; ie, they now have no coal lease application activity within the mapsheet area. These recent application withdrawals have been reflected on the Coal Dispositions 'snapshot' map located on the enclosed ALBERTA RESEARCH COUNCIL MAP RCM5.

Established Coal Resources and Reserves

Coal resources and reserves have been calculated by the ERCB (1989) for the whole of Alberta.

The mapsheet contains the:

- o Smoky River Coal Field; part of the ERCB-designated 'Mountain Region'

- o Prairie Creek 'Coal Occurrence'; part of the ERCB-designated 'Foothills Region' and located in the northeast part of the mapsheet.

Only the Coal Field outline has been shown on the GIS plot.

Exploration History

Coal

Coal Adits

During 1970-71, McIntyre Mines Limited drove 19 adits in the Copton East area (Townships 58 & 59, Ranges 9 & 10, W6th Meridian). Adit drivage lengths varied from 7 meters in A-15 to 70 meters in A-19. The average adit length was 37+ meters. Adits were driven into one or more of the No.'s 4, 5, 6, 7 & 8 seams.

The adit sites are shown on the GIS plot.

In a coal exploration application to the ERCB (Application 871204; location outline identified as 19 on the GIS plot), Smoky River Coal Limited proposed to drive an additional adit in the Copton area, specifically in Lsd 16, Section 25, Township 58, Range 10, W6th Meridian. It is not known if this exploration work was carried out, and thus, this site has not been included on the GIS plot.

Coal Exploration Drillholes

Some 1557 coal exploration holes³ have been drilled by 4 companies between 1961 and 1986. Of the holes drilled, 1473 holes (95%) contained coal intersections⁴ on the AGS Coal Database; it follows that 84 holes (5%) did not intersect coal. Hole depths ranged from 6 to 370+ meters in depth.

Coal exploration drilling activities were carried out by a number of companies. A summary follows

<u>Company</u>	<u>Number of Holes Drilled</u>
Esso Resources Canada Limited	12
McIntyre Mines Limited	832
Meadowlark Farms Inc.	166
Smoky River Coal Limited	547

The 1379 coal exploration holes drilled by Smoky River Coal Limited and McIntyre Mines Limited, were for the most part, drilled on, or in close proximity to, their mine permit areas.

Based on the April, 1989 version of the ERCB Coal Hole File, details of the coal exploration drillholes are given in Appendix 1 and includes information on:

- o SITID; the assigned Site Identification Number within the AGS Coal Database
- o CAT_ID; the assigned Catalogue Identification Number within the ERCB Coal Hole File (April, 1989 version)
- o ORIG; the Original Identification Number of the Datapoint (ie, drillhole number)

³Information, concerning coal exploration drillholes, is based on the AGS Coal Database, April, 1989 version of the ERCB Coal Hole File. It is planned, in the next fiscal year, to upgrade the AGS Coal Database with the April, 1991 version of the ERCB Coal Hole File.

⁴There was not adequate time to review/verify the coal intersections of the coal drillholes within the 83L/3 mapsheet. A task of such magnitude is beyond the scope of the CCP.

- o EDITED; within the ERCB Coal Hole File, the equivalent to ORIG has been limited to 6 spaces; this, in some cases, has not been sufficient to record the ORIGINAL corporate assigned drillhole number; within the AGS Coal Database, ORIG has been allocated 11 spaces; a 'X' in the EDITED column identifies those drillholes whose ORIG's were truncated; drillholes listed in the ORIG column of the listing have been edited and now reflect the 'true' Original Identification Numbers
- o NCinDH; a 'NC' in the column indicates that there were no coal intersections, for the drillhole, contained within the AGS Coal Database
- o M; Meridian
- o T; Township
- o R; Range
- o S; Section
- o RSEC; Reference Section
- o RCNR; Reference Corner
- o METN; Meters north or south from the reference corner
- o METE; meters east or west from the reference corner
- o ELEV; Ground or surface elevation of the datapoint (drillhole)
- o TD; Total depth of drillhole reported in meters
- o CORPNUM; the assigned Corporation Number within the AGS Coal Database
- o CPDT; completion date of the datapoint (drillhole); date coded as yymmdd
- o COMPANY; identifies the company that generated the datapoint (drillhole).

Coal Exploration Trenches/Hand Trenches

Between 1988 and 1990, Dawson of the GSC/ISPG conducted a series of field mapping programs in the Wapiti area of northwestern Alberta. The programs were executed, in part, on

the mapsheet 83L/3. Three hand-dug trenches were excavated to expose coal seams, of the Cutbank coal measure, within the mapsheet area.

Trench locations have been shown on the GIS plot.

Appendix 2 contains copies of the three trench logs, plus additional information concerning Dawson's field mapping programs in the Wapiti area.

Oil and Gas Wells

Within the study area, 6 oil and gas wells have been drilled. Of the wells drilled,

- o 5 have been abandoned

- o 1 is a capped gaswell.

See Appendix 3 for additional data. The Appendix is based on queries from the ERCB oil and gas database (April, 1989 version).

Coal Occurrences

Coal Adits

At least nineteen adits have been driven in the Copton East area of the CCP mapsheet 83L/3. Locations have been identified on the GIS plot.

Seam No.'s 4, 5, 6, 7 & 8 of the Grande Cache Member of the Gates Formation of the Luscar Group were intersected. Seam thicknesses intersected varied from 0.4 meters (No. 8 Seam in adit A-7) to 8.7 meters (No.4 Seam in adit A-19).

Coal Exploration Drillholes

Coal intersections, per coal exploration drillhole, have been included in Appendix 4. The listing includes

- o SITID; the AGS Coal Database identification number

- o CAT_ID; the ERCB catalogue identification number

- o ORIG; the original company-assigned drillhole number
- o M T R S ; Dominion Land Survey (DLS) information; ie, Meridian, Township, Range and Section
- o TOP DEPTH; depth to top of coal in meters
- o BOT DEPTH; depth to bottom of coal in meters
- o THICK; thickness of the coal seam in meters
- o SEAM; the ERCB_Designated Coal Seam Name/Number (if assigned/known); a '0' indicates that the seam has not been correlated
- o MIN; Mineral Matter content of the coal (often a best-estimate from geophysical log interpretation); a '0' indicates that the mineral matter of the coal was not available and/or not derived
- o REGOLITH; thickness, in meters, of the regolith
- o PIKNUM; the geological pick identification number as stored in the AGS Coal Database
- o REMARKS.

Coal Exploration Trenches/Hand Trenches

Three hand-dug trenches were excavated, by Dawson of the GSC/ISPG, to expose the Cutbank coal measure contained within the mapsheet 83L/3. Trench locations have been shown on the GIS plot. Trench logs are contained in Appendix 2.

Individual coal seams exposed within the trenches vary in thickness from 0.1 to to 2.7 meters.

Coal Outcrops

Numerous coal outcrops and/or coal seam traces have been documented within the mapsheet 83L/3 by

- o ARC/AGS
- o Esso Canada Resources Limited

- o GSC/ISPG
- o Meadowlark Farms Inc.
- o Smoky River Coal Limited/ McIntyre Mines Limited
- o Union Oil Company of Canada Limited.

Coal outcrop locations and/or coal seam traces have been identified on the GIS plot; maximum coal outcrop thicknesses vary from

- o 4+ meters for coals contained within the Cutbank coal measure to
- o 8 meters for Luscar Group coals.

Coal Quality Summary

Coal Rank

Within the mapsheet 83L/3, the rank of the coal varies from

- o high volatile bituminous C in the Upper Brazeau Formation of the Upper Cretaceous/Tertiary Wapiti Group, specifically the Cutbank coal measure to
- o low to medium volatile bituminous in the Lower Cretaceous Luscar Group.

No coal quality information is available for coals of the Upper Coalspur Formation of the Upper Cretaceous/Tertiary Wapiti Group (ie, the Kakwa coal measure) which may be deposited within the mapsheet area. The rank of the coal, if present, would likely be high volatile bituminous C.

Coal Adits

Samples, from the nineteen known adits within 83L/3, were extensively analyzed.

Only Free Swelling Index (FSI) tests were run on coal samples from Adits A-1 and A-6. Samples from these two adits were not subjected to additional tests due to their high degree of oxidation. Coal quality information, generated from samples from the remaining seventeen adits, included

- o Proximate Analyses
- o Sulphur
- o Heating Value
- o Ash Analysis
- o Ash Fusion Temperature(s)
- o Dilatometer tests
- o FSI
- o Hardgrove Grindability Index (HGI) determinations
- o Petrographic Analyses
- o Plastometer tests.

Coal Exploration - Drillholes

Four hundred and ninety eight drillholes, within the mapsheet 83L/3, contain coal quality information. All but one pertain to coal in the Luscar Group; said one drillhole pertains to coal in the Cutbank coal measure of the Wapiti Group in the northeast part of the mapsheet. Coal quality data generated includes

- o 266 complete Proximate Analyses (as-received basis) from 152 drillholes
- o 443 complete Proximate Analyses (air-dried basis) from 232 drillholes
- o 582 complete Proximate Analyses (dry basis) from 243 drillholes
- o 406 analyses of Moisture and Ash from 221 drillholes
- o 406 analyses of Sulphur (air-dried basis) from 221 drillholes
- o 763 analyses of Sulphur (dry basis) from 274 drillholes
- o 264 analyses of Heating Value (as-received basis) from 151 drillholes
- o 62 analyses of Heating Value (air-dried basis) from 40 drillholes

- o 327 analyses of Heating Value (dry basis) from 140 drillholes
- o 5 samples of Ash Analysis from 4 drillholes
- o 5 analyses of Equilibrium Moisture from 1 drillhole
- o 2 samples of Ultimate Analyses from 1 drillhole.

Weighted averages of proximate analyses for the Luscar Group coals (raw) have been generated for 150 of the drillholes. Results are presented in Appendix 5.

Coal Outcrops

A number of outcrops, within the mapsheet 83L/3, have been sampled. Coal quality data generated from the samples include

- o 63 analyses of maximum vitrinite reflectance from 47 outcrops; samples were collected by the ARC/AGS and the GSC/ISPG between 1981 and 1989; reflectance values of the samples range between 1.18 and 1.98%. Selected locations and values have been presented on a 'snapshot' map of RCM5
- o proximate analyses, sulphur, heating value and equilibrium moisture determinations for 1 outcrop
- o proximate analyses, sulphur and FSI determinations for 1 outcrop
- o 9 analyses of palynology from 9 outcrops; information is limited to location only.

Coal Exploration Trench/Hand Trench Data

In 1990, Dawson of the GSC/ISPG conducted a field mapping program to evaluate the Cutbank coal measure contained, in part, within the mapsheet 83L/3. Three hand-dug, coal trenches were sampled. Samples were analyzed for proximate analyses, sulphur, heating value and vitrinite reflectance.

The analytical data, excepting vitrinite reflectance values, are presented on the trench logs contained within Appendix 2. Reflectance value determinations are in-progress and are not currently available. Trench site locations have been presented on RCM5; one of the snapshot maps identifies the missing vitrinite reflectance values '-9.99'.

Operating and Abandoned Coal Mines

The majority of the past and present coal mining activities of Smoky River Coal Limited, and formerly McIntyre Mines Limited, are located within the 83L/3 mapsheet area. Part of the workings of an abandoned, underground coal mine are located south of the Smoky River and extend into the NTS mapsheet 83E/14.

The mining operations, which commenced in 1967, have to the end of November, 1990 produced some 46 million tonnes of coal. Coal production is/was from both surface and underground mines. A production breakdown follows

- o twenty six million tonnes have been surface-mined
- o twenty million tonnes have been underground-mined.

During the first eleven months of 1990, Smoky River Coal Limited produced 2.1 million tonnes of coal. A production breakdown follows

- o 1.27 million tonnes have been surface-mined, of which 179,139 tonnes were produced in November, 1990
- o 0.84 million tonnes have been underground-mined, of which 77,120 tonnes were produced in November, 1990.

Coal Resource Development Potential

A semiquantitative and subjective evaluation of the potential of coal development in the map area is based on limited data. It is based on mainly geological criteria and does not take into account governmental restrictions on coal development or evaluate actual economic constraints to development now or in the future. The three criteria that have been used are Coal Potential, Mining Potential, and Data Availability (discussed in more detail below). Areas in Green on the companion map (thematic inset 'Coal Development Potential') reflect higher level of knowledge and potential for development of coal than the blue (medium) or red areas (low). Areas rated in blue indicate more information is needed to determine the coal development potential. Areas

colored red indicate some potential for development. The remaining uncolored areas have no data available often because the coal, if present, is at depth under non coal-bearing rocks.

Coal Potential

Resources

The amount of data is too small for a quantitative evaluation of coal resources except in those limited areas with drilling. The ERCB (1989) provides estimates of in-place resources for the Smoky River Coal Field and for the Prairie Creek 'Coal Occurrence'.

Coal Quality

Very little coal quality data is available but where test results are present the potential of the coal for development is strengthened. In general where a sample has been collected and analyzed the coal has an inherent development potential.

Mining Potential

Overburden

An evaluation of overburden for surface mining and depth for underground mining has been made. (The 'Mining Potential' criteria did not take into account governmental restrictions on coal development or evaluate actual economic constraints to development now or in the future.)

Geotechnical

Geotechnical considerations included an evaluation of structural setting, both simple and complex, with the possibility of structurally thickened seams. Consideration was given to infrastructural concerns related to site, environment and potential mining problems.

Data Availability

Little coal data is available for the entire map area but where present the potential of the coal for development is strengthened. In general, where an outcrop, adit, drillhole, trench or sample is present the coal has an increased development potential. Some value was given to areas containing sediments that typically include coal.

Future Work

For much of the southern third of the map area a reasonable exploration database exists and some 46 million tonnes of coal have been mined in the area; the balance of the mapsheet area has only been superficially examined from a coal resource/exploration point of view. Additional coal quality data needs to be collected and detailed stratigraphic and/or structural studies are needed in the less explored areas.

The work by Langenberg et al (1987), in the southeastern part of map area, presents the complex geology of the region and demonstrates how structural studies and detailed mapping provides the significant perspective necessary for evaluation of coal resources in the Mountain Region. Similar studies are needed in the other areas mapped as Luscar Group on the map as there is potential for both structurally thickened and 'hidden' coal resources. The rank of the Luscar Group coals varies from low to medium volatile bituminous.

The presence of thick coals of low to medium volatile bituminous rank and potential of structural trapping could indicate the area has potential for coalbed methane resources. Many of the areas between the Luscar Group, shown as blank (white) on the accompanying map, RCM5, are synclines, often faulted, with Luscar sediments at depth. Additional work is required to establish and evaluate coalbed methane resources in the area. To date, only 6 oil or gas wells have been drilled within the study area.

The northeast segment of the mapsheet should also be considered for its coal potential. The Wapiti Group contains the Cutbank coal measure and (possibly), the Kakwa coal measure. The coal has a rank of high volatile bituminous C. Consideration of these coals for coalbed methane potential, while (probably) not as high as the Luscar Group coals, should not be excluded.

For most of the remaining map area, little data is available and the coal development potential is somewhat uncertain.

Appendix 2. 83L/3 - GSC/ISPG (Dawson) Coal Trench Data from the Wapiti Project

Between 1988 and 1990, Dawson of the GSC/ISPG excavated, described and sampled a number of coal outcrops and hand-dug trenches in the Wapiti area of northwestern Alberta.

Copies of thirty three trench logs have been provided to the Alberta Geological Survey (AGS) for use, as required, in the Coal Compilation Project (CCP). Said trenches have been distributed over a large area (specifically, within NTS mapsheets 83K, 83L and 83M). The following table provides summary data concerning the trench logs; it should also be noted that many of the trenches are located outside of the coverage of the CCP for 1990/91. An 'X' in the 'CQ' column indicates that coal quality data has also been included on the trench log.

<u>Trench Designation</u>	<u>Formation</u>	<u>Coal Measure</u>	<u>NTS Mapsheet</u>	<u>CQ</u>	<u>Applicable to CCP 1990/91</u>

Appendix 4. 83L/3 - Coal Intersections of the Coal Drillholes

 CURRENT FILENAME: [COALREG.90]83L3_PX.DAT
 ORIGINAL FILENAME: [COALREG.90]P83L3.DAT
 MAPSHEET: NTS 83L/3

NOTE: Coal intersection picks have been extracted from the AGS Coal Database, April, 1989 version of ERCB Coal Hole File.

Dwf 9101

Appendix 6. 83L/3 - Unpublished reports and/or applications, available on microfiche at the ERCB

Esso Minerals Canada. 1981-11-30. Coal Exploration Application for a Permit for Deep Drilling, Kakwa Prospect. ERCB Application No. 810991. Fiche of Application from ERCB Records Center. Outline identified as 10 on GIS plot.

McIntyre Mines Limited. 1981-04-30. Application for a License to Commence an Underground Mine at a Previously Permitted Mine Site Development, 9G - 4 Mine. ERCB Application No. 800300. Fiche of Application from ERCB Records Center. Outline identified as 12 on GIS plot.

McIntyre Mines Limited. 1981-04-01. Coal Exploration Permit Application for the Planned 1981 No. 9 Mine Exploration Drill Program. ERCB Application No. 810272. Fiche of Application from ERCB Records Center. Outline identified as 11 on GIS plot.

McIntyre Mines Limited. 1980-01-24. Permit Application for the Planned 1980 Exploration Drill Program. ERCB Application No. 800063. Fiche of Application from ERCB Records Center. Outline identified as 13 on GIS plot.

McIntyre Mines Limited. 1979-01-02. Application for a License to Begin Mining Operations at an Abandoned Mine - Mine No. 1765/05. ERCB Application No. 79002. Fiche of Application from ERCB Records Center. Outline identified as 14 on GIS plot.

Smoky River Coal Limited. 1990-06-01. Application for an ERCB Licence and Development and Reclamation Approval, No. 12 Mine West, W-1 Pit. ERCB Application 900787. Fiche of Application from ERCB Records Center. Outline identified as 27 on GIS plot.

Smoky River Coal Limited. 1989-06-16. Application for No. 12 Mine East; E-2 Pit, Detailed Mine Plan. ERCB Applications 890862, 890863 & 890864. Fiche of Application from ERCB Records Center. Outline identified as 15 on GIS plot.

Smoky River Coal Limited. 1989-03. An Application for an ERCB License and a Development and Reclamation Approval for No. 11 Mine. ERCB Applications 890397, 890398, 890399 & 890400. Fiche of Application from ERCB Records Center. Outline identified as 16 on GIS plot.

Smoky River Coal Limited. 1988-12. Application for Amendment to License No. C87-17, Mine No. 1774/12 East. ERCB Applications 882160 & 882161. Fiche of Application from ERCB Records Center. Outline identified as 17 on GIS plot.

Smoky River Coal Limited. 1988-02-23. No. 11 Mine Bulk Sample Pit Application. ERCB Application 880374. Fiche of Application from ERCB Records Center. Outline identified as 18 on GIS plot.

Smoky River Coal Limited. 1987-08-06. Coal Exploration Approval Application for Two Copton Area Core Holes; Coal Exploration and Approval and ERCB Permit Application for Copton Area Adit. ERCB Application 871204. Fiche of Application from ERCB Records Center. Outline identified as 19 on GIS plot.

Smoky River Coal Limited. 1987-06-09. Application for License to Extend Mine Boundary - Mine No. 1765/09B. ERCB Application No. 870857. Fiche of Application from ERCB Records Center. Outline identified as 20 on GIS plot.

Smoky River Coal Limited. 1987-05-21. Application for ERCB Mine Licenses and Development and Reclamation Approval for No. 12 Mine East. ERCB Applications 870734, 870735 & 870736. Fiche of Application from ERCB Records Center. Outline identified as 21 on GIS plot.

Smoky River Coal Limited. 1986-10-31. Application for No. 12 Mine West Bulk Sample. ERCB Application 861347. Fiche of Application from ERCB Records Center. Outline identified as 22 on GIS plot.

Smoky River Coal Limited. 1986-09-30. Application for Resumption of Normal Work, Mine 1765/09G, License No. C80-26B. ERCB Application 861181. Fiche of Application from ERCB Records Center. Outline identified as 23 on GIS plot.

Smoky River Coal Limited. 1986-09. Application to Develop No. 12 Mine. ERCB Application 861092. Fiche of Application from ERCB Records Center. Outline identified as 24 on GIS plot.

Smoky River Coal Limited. 1986-07-30. Application for Mine No. 1774 (No. 9 Mine), Modifications to Mine No. 1774/01. ERCB Applications 860861, 860862 & 860863. Fiche of Application from ERCB Records Center. Outline identified as 25 on GIS plot.

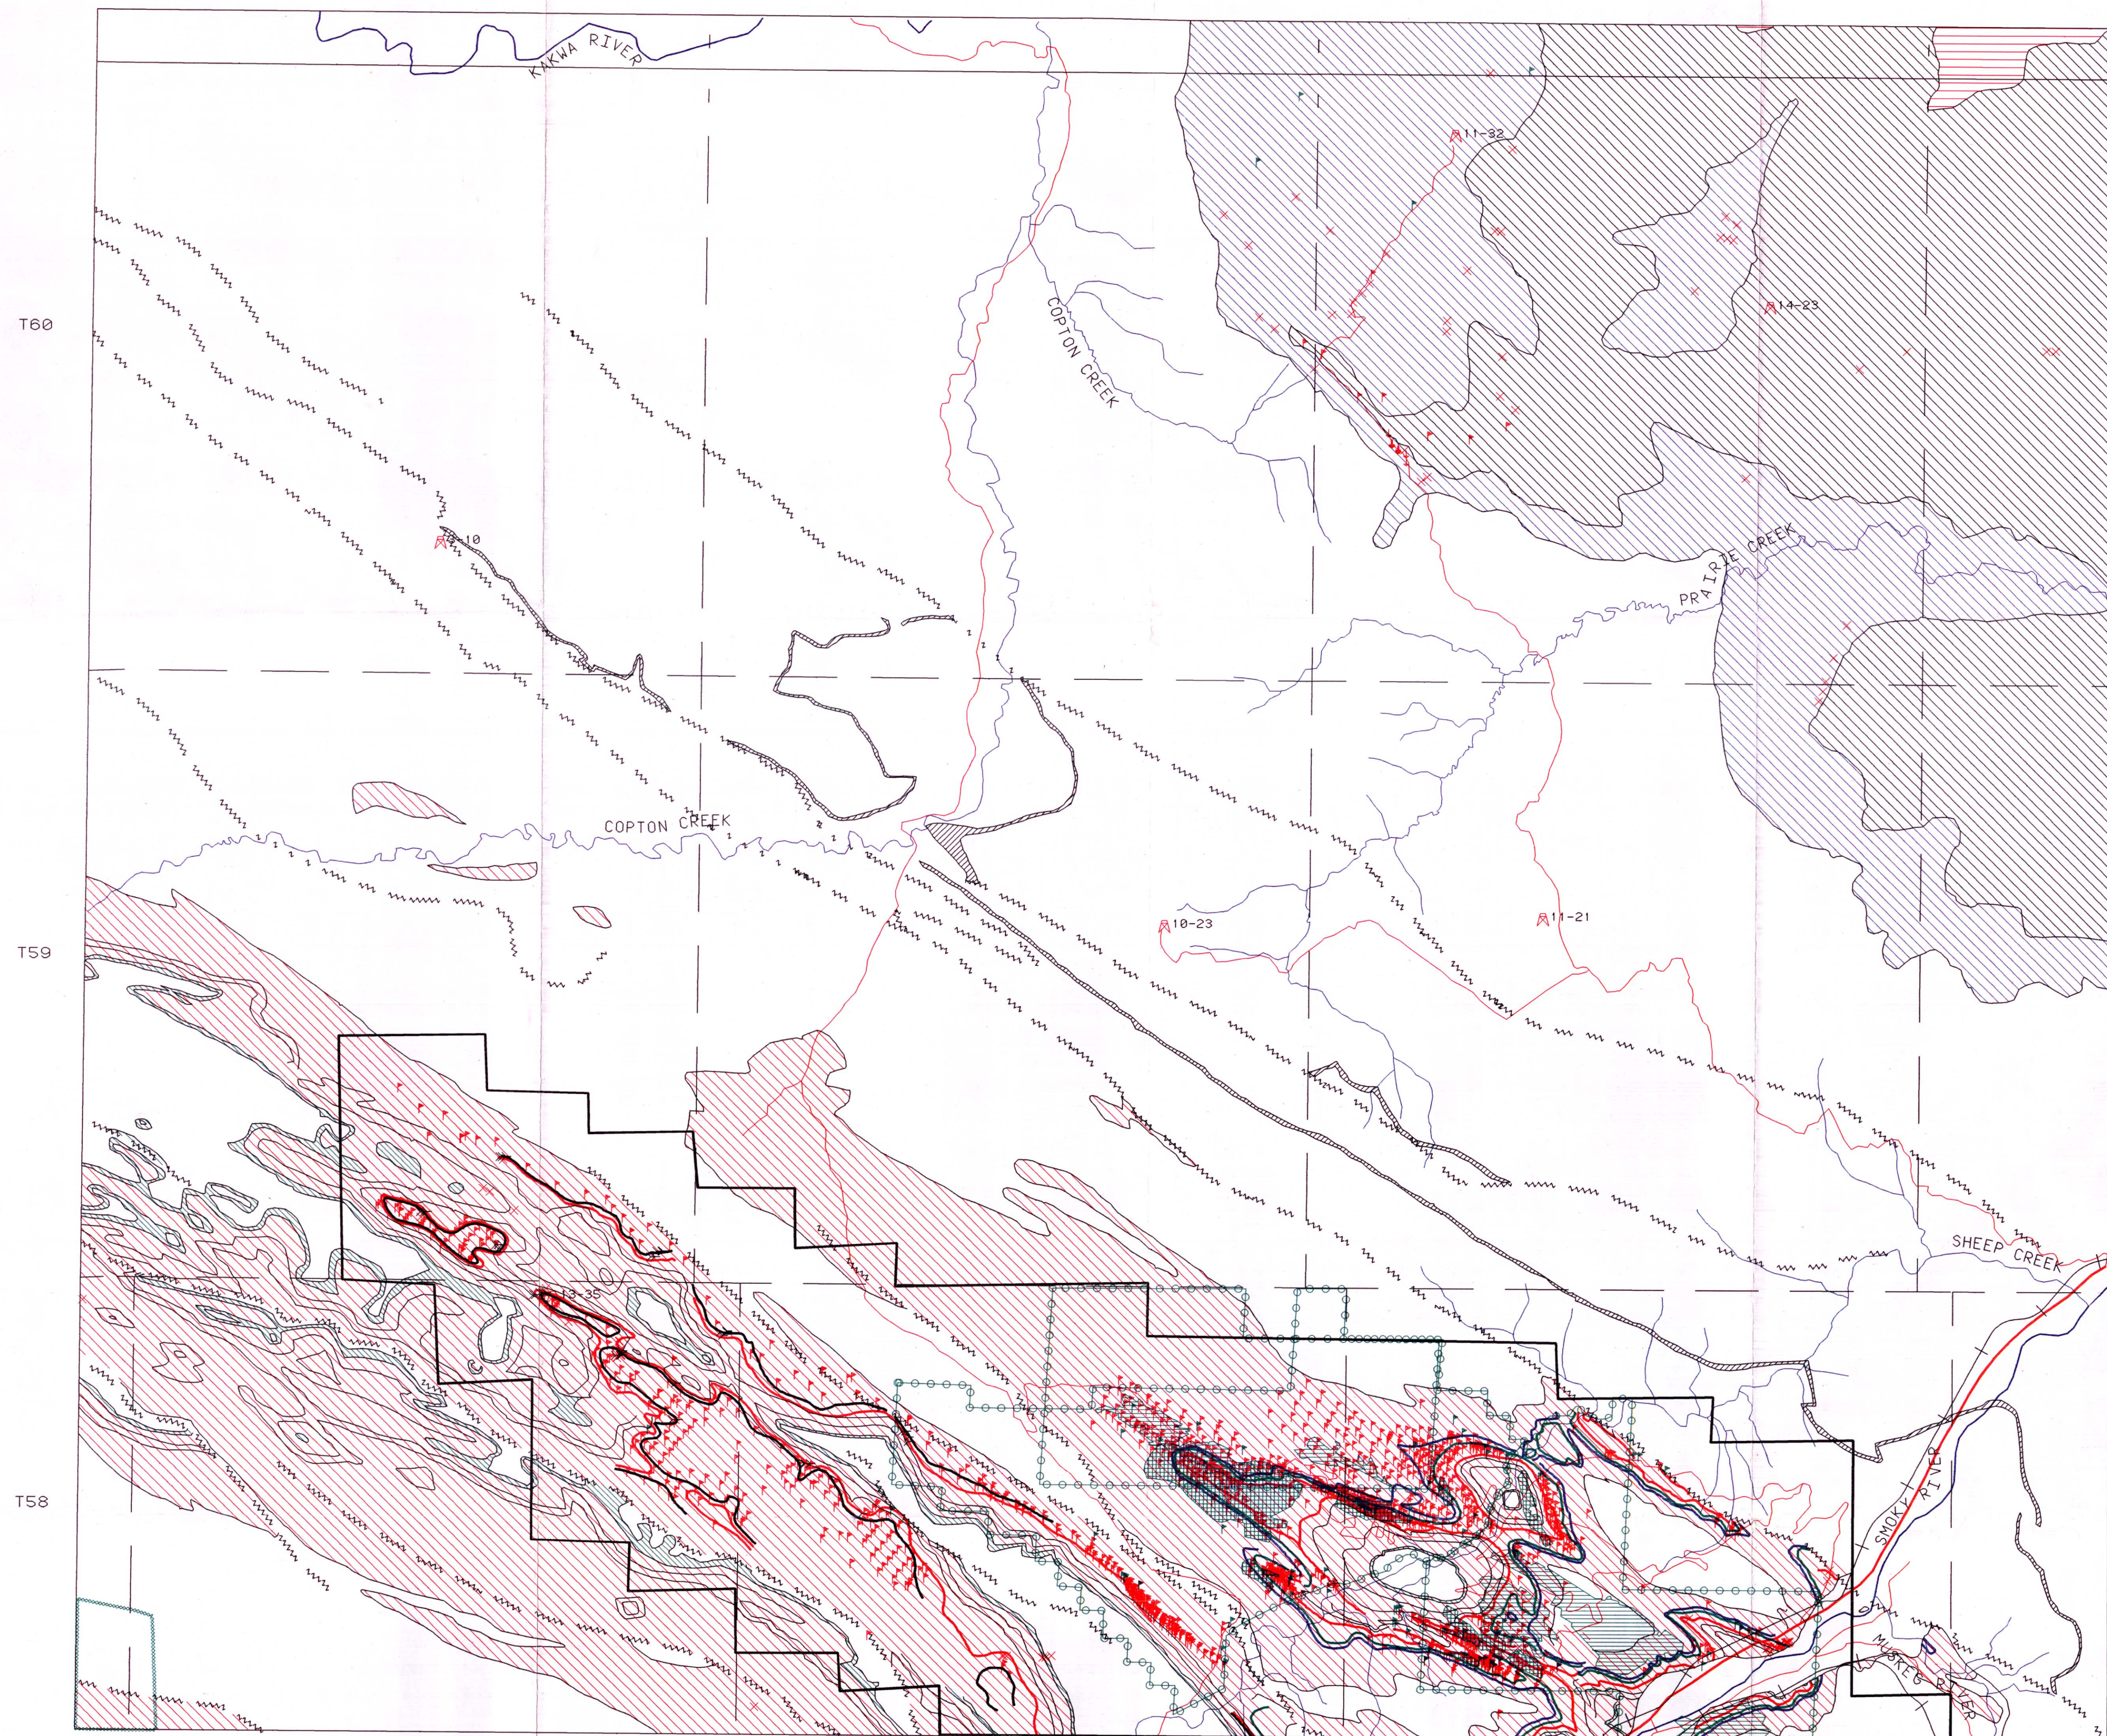

Smoky River Coal Limited. 1984-03-01. Application for Mine No. 1774 (No. 9 Mine),
Modifications to Barrett 3-5 Mining Plan. ERCB Applications 840279, 840280, 840281 &
840282. Fiche of Application from ERCB Records Center. Outline identified as 26 on GIS plot.

REGIONAL COAL MAPPING - COPTON CREEK NTS 83L/3

REGIONAL COAL MAPPING - COPTON CREEK NTS 83L/3 COAL DEVELOPMENT POTENTIAL*

- HIGH POTENTIAL
- MEDIUM POTENTIAL
- LOW POTENTIAL
- NO DATA AVAILABLE

* NOTE *

Coal Development Potential is a semi-quantitative and subjective evaluation of the potential of coal development based on limited data and reflecting current mining technology and general economic conditions. CAUTION: THESE RESULTS ARE BASED ON MAINLY GEOLOGICAL CRITERIA AND DO NOT TAKE INTO ACCOUNT governmental restrictions on coal development or evaluate actual economic constraints to development now or in the future. To establish a 'potential map' for a given set of criteria, please contact the AUS.

COMPILED DATE JANUARY, 1991
REVISION DATE MAY 13, 1991

RELIABILITY AND USE
Information contained on this map was derived from various sources and may be subject to change. Every attempt has been made to accurately portray the data; however, the user is advised to provide their own verification of the data. For more information or to provide comments, please contact the Regional Coal Geology Section, Research Council, P.O. Box 8338, Station F, Edmonton, Alberta, T6H 5Z2.

FUNDING
Funds for this project have been provided by the Alberta Department of Energy and the Alberta Research Council.

REGIONAL COAL MAPPING - COPTON CREEK NTS 83L/3 INDEX TO SPECIFIC REFERENCE DOCUMENTS

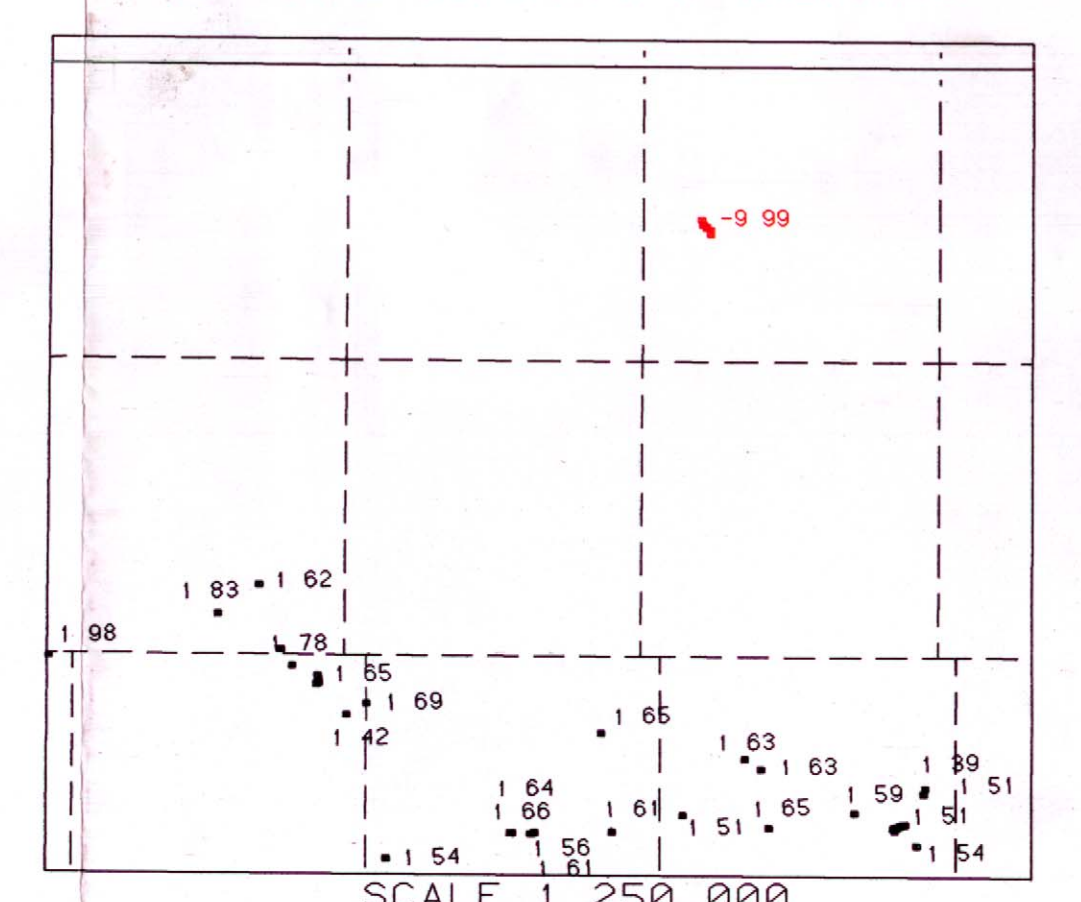

SCALE 1 250,000

INDEX TO SPECIFIC REFERENCE DOCUMENTS FOR THE MAPSHEET NTS 83L/3

1. Langenberg, D. K., Richardson, R. J. H. and Dawson, F. M. 1987. Regional Coal Geology of the Copton Creek area, Alberta. Alberta Research Council Geological Survey Bulletin No. 55. Report containing: a) map 'Geological Map Grande Cache Area, Alberta', scale 1:15,000; b) 'Cross Section, Grande Cache Area, Alberta', scale 1:15,000; c) map 'Structure of Top of Number 4 Coal Seam, Grande Cache, Alberta', scale 1:30,000.
2. Outline identified on 1 on GIS plot.
3. Geological Survey of Canada Report 2185, Scale 1:50,000. Outline identified on 2 on GIS plot.
4. Langenberg, D. K. 1981. Coal Geology of the Copton Creek Area. Geological Evaluation Based on 1980 Field Mapping Program. Union Company of Canada Limited. Report contains detailed geological maps (Scale 1:25,000). Outline identified on 3 on GIS plot.
5. Geological Survey of Canada Report 2185, Scale 1:50,000. Outline identified on 4 on GIS plot.
6. Mountain and Gravelly Creek Metallurgical Coal Prospects - Preliminary Geological Evaluation - 1980 Field Program. Planning Report. Union Company of Canada Limited. Outline identified on 4 on GIS plot.
7. Mulbert, E. 1952. Geology of No. 20 Mine, Copton, Alberta. Report prepared for McIntyre Mines Ltd. Outline identified on 5 on GIS plot.
8. Mulbert, E. 1952. Geology of No. 20 Mine, Copton, Alberta. Report prepared for McIntyre Mines Ltd. Outline identified on 5 on GIS plot.
9. Mulbert, E. 1952. Geology of No. 20 Mine, Copton, Alberta. Report prepared for McIntyre Mines Ltd. Outline identified on 5 on GIS plot.
