ALBERTA RESEARCH COUNCIL MAP RCM7 (in pocket)

Foreword

The prime objective of the three year pilot Coal Compilation Project (CCP), initiated in the 1989/90 fiscal year, is to provide coal resource maps to stimulate and support industry exploration programs, and assist government in matters of resource management. An essential feature of the program is the use of cost effective Geoscience Information System (GSIS) technology that allows the database and various thematic maps to be analyzed, updated, and displayed with complete flexibility at any scale.

Each map set is intended to be a stand alone, unique product contributing to an overall synthesis of information. Maps generated can be at a regional or reconnaissance level. Collection of new data has been limited. Data compiled and evaluated has been based on the following principal sources; Alberta Research Council/Alberta Geological Survey (ARC/AGS); Energy Resources Conservation Board (ERCB); Geological Survey of Canada (GSC/ISPG); and information from the coal industry sector. Industry has cooperated and supported the CCP by providing unpublished corporate reports to the AGS. The availability of these reports has been an essential component toward the success of this project.

The CCP may encompass up to eighteen 1: 50 000 scale mapsheets, to be completed over the three year period. Nine mapsheets have been completed to date, four during the 1989/90 fiscal year and an additional five during the past 1990/91 fiscal year.

Custom maps and database searches can be obtained by contacting the Coal Geology Section, Alberta Geological Survey, Alberta Research Council. Raw coal exploration data¹ that are in the 'public' domain can, for a nominal fee, be viewed in microfiche form at the Records Center of the Energy Resources Conservation Board in Calgary, Alberta. Arrangements can also be made to acquire copies of all/selected data.

¹ Specifically, the geophysical logs (and other associated data) of coal exploration drillholes and, as available, analytical data relating to coal quality.

Acknowledgments

The project was funded by the Alberta Department of Energy and the Alberta Research Council. The Alberta Geological Survey Coal Technical Advisory Sub-Committee provided valuable guidance for the project. Mike Dawson of the Geological Survey of Canada (GSC/ISPG) provided significant Upper Cretaceous/Tertiary coal subcrop information as well as trench logs and analytical data from said trenches. Esso Resources Canada Limited and Union Oil Company of Canada are thanked for making unpublished reports/data available to the Alberta Geological Survey. D. Goulet assisted with map digitization and data entry.

Introduction

Objective

The stated objective of the pilot Coal Compilation Project (CCP), initiated in the 1989/90 fiscal year, was to provide coal resource maps on a 1: 50 000 scale, which would

- o stimulate and support industry exploration programs, and
- o assist government in matters of resource management (eg, Integrated Resource Plans) in areas that may have good coal development potential, but have a lack of data or understanding.

Each map set was intended to be a stand alone, unique product contributing to an overall synthesis of information. Maps generated would be at a regional or reconnaissance level. Collection of new data and/or actual time in the field has been limited. Data compilation and evaluation has been based on the following principal sources

- o Alberta Research Council/Alberta Geological Survey (ARC/AGS)
- o Energy Resources Conservation Board (ERCB)
- o Geological Survey of Canada (GSC/ISPG)
- o cooperation from the coal industry sector.

The CCP may encompass up to eighteen 1: 50 000 scale mapsheets, to be completed over a three year pilot period. Nine mapsheets have been completed to date, four during the 1989/90 fiscal year and an additional five during the past 1990/91 fiscal year. At the end of the three year period, the CCP should be evaluated to determine if the project should be expanded and/or continued. As each map represents a complete product, the Coal Technical Advisory Subcommittee would be able to monitor the progress of the research and react to changing priorities without being committed to spending funds more than one year in advance.

Four contiguous NTS mapsheets², located within the Hinton - Grande Cache corridor, were completed during the first fiscal year (1989/90) of the CCP. During the past fiscal year (1990/91), an additional five, but still contiguous, NTS mapsheets were completed in the Grande Cache - Musreau Lake area (see Figure 1). From southeast to northwest (to north), the mapsheets are identified as 83E/16 (Donald Flats), 83L/2 (Bolton Creek), 83L/3 (Copton Creek), **83L/7 (Prairie Creek)** and 83L/10 (Cutbank River).

For each mapsheet, a product has been generated that includes

- o a coal resource map (scale 1: 50 000)
- o 'snapshot' maps (scale 1: 250 000)
- o supplementary text.

Methodology and Discussion of GIS

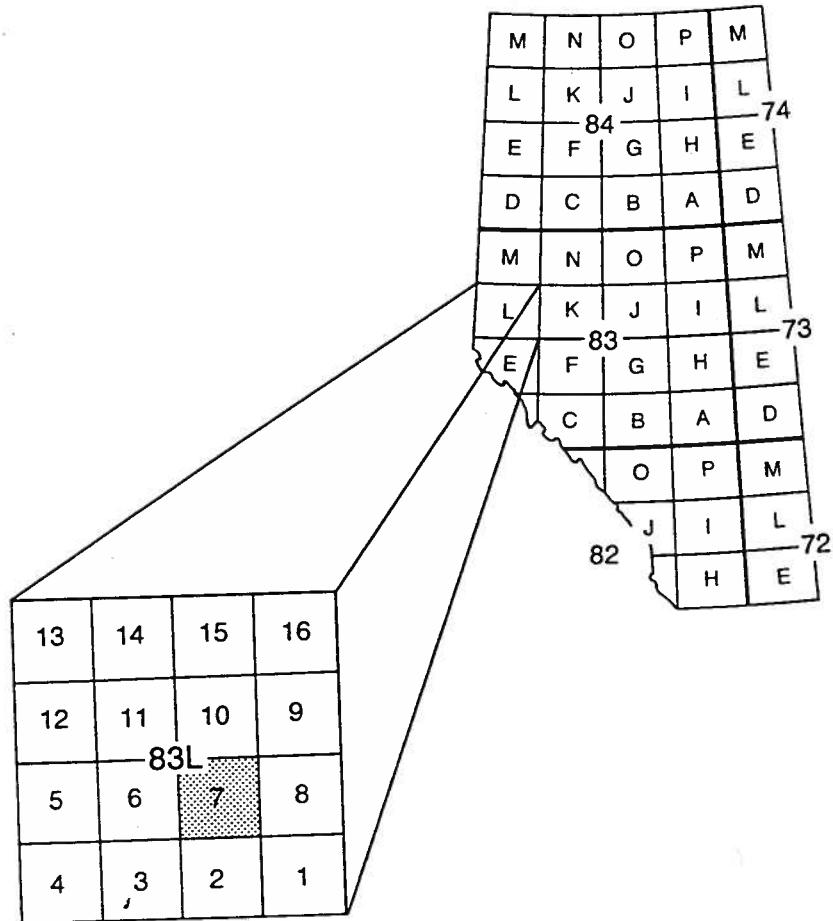

Geographic Information Systems (GIS) which encompass spacial data storage, display and analysis by computer have been employed in the municipal, environmental and forestry sectors for many years. The term GIS has been applied to mainly surface or geographic studies and has not as a rule been extended to the 3rd dimension (depth) or temporal aspects (time). A Geoscience Information System (GSIS) goes beyond what is generally thought of as traditional GIS and is focused strongly on subsurface information. An essential feature of the CCP is the use of cost effective GSIS technology that allows the database and various thematic maps to be analyzed, updated, and displayed with complete flexibility at any scale. In addition custom maps can be produced from the various data and graphic elements that have been entered into the information system.

Much of the present methodology, software and hardware used in this study is described in detail in the Alberta Research Council, Open File Report 1989-03A (Richardson et al, 1989). In general both digital and hard copy data or graphic elements are entered into a GIS software product (pcARC/INFO) where they can be analyzed, displayed or plotted to hardcopy.

During the initial year of the CCP, substantial time was spent in

²From southeast to northwest, the mapsheets are identified as 83F/5 (Entrance), 83E/9 (Moberly Creek), 83E/15 (Pierre Greys Lakes) and 83E/14 (Grande Cache).

Figure 1. Coal Compilation Project - Prairie Creek NTS 83L/3 : Location

- o developing the hardcopy, product template, and
- o replicating the above template into the electronic medium of GIS.

During the past year, much of the original design work was utilized where appropriate. There were numerous, additional design problems, not encountered in the initial year's work, which also had to be resolved. These 'new' design difficulties consumed significantly more time than was initially anticipated. As a net result, expectations of the number of CCP mapsheets generated during the fiscal year fell somewhat short of expectations.

The mapsheets completed to date have each provided their own unique design difficulties, a situation which appears to be more the norm rather than the exception. If, as expected, this pattern continues into the third year of the CCP, the number of mapsheets to be generated should be adjusted downward to reflect, and acknowledge, time spent in resolving these unique design problems.

Location and Access

The study area of mapsheet NTS 83L/7 (Prairie Creek) is located in west-central Alberta between Latitudes $54^{\circ} 15'$ and $54^{\circ} 30'$ North, and Longitudes $118^{\circ} 30'$ and $119^{\circ} 00'$ West (between Townships 61 and 63 inclusive, and Ranges 4 to 7 inclusive, West of the 6th Meridian).

From the center of the mapsheet, the closest communities are

- o Grande Cache (83E/14), located some 90 kilometers to the southwest or
- o Grande Prairie (83M/2), located some 120 kilometers to the north.

Paved and improved access, to and within the area, is provided by Highway 40 and Secondary Highway 734. Numerous all-weather, gravelled wellsite and logging roads also exist. Additional secondary seasonal access is provided by a network of roads, trails and seismic lines.

The area is serviced by the Canadian National Railway and the Alberta Resources Railway; the rail line, located in the extreme southeast corner of the mapsheet, parallels the Smoky River drainage. The rail line has the capacity to accommodate coal unit trains. The coal terminal at Ridley Island, located at Prince Rupert, B.C., is located approximately 1300 rail-kilometers

from Grande Cache; the Neptune Terminals at Vancouver, B.C. are located approximately 1150 rail-kilometers from Grande Cache.

Geological Setting

Within the mapsheet 83L/7, near-surface coal measures are deposited within thick successions of sandstones, siltstones, shales and conglomerates. Known coal-bearing sequences are contained within the Upper Cretaceous/Tertiary Wapiti Group.

The coal-bearing Luscar Group, while not present in surface exposures, occurs at depth. Within the mapsheet, the Luscar Group is intersected, in the subsurface, in the 2400 to 3500 meter_deep range.

Stratigraphic nomenclature for the above strata is shown in Figure 2.

Stratigraphy of Coal-Bearing Units

Wapiti Group

The Wapiti Group consists of primarily nonmarine sandstones, conglomerates, shales and coals; the Group lies conformably above the marine Wapiabi Formation.

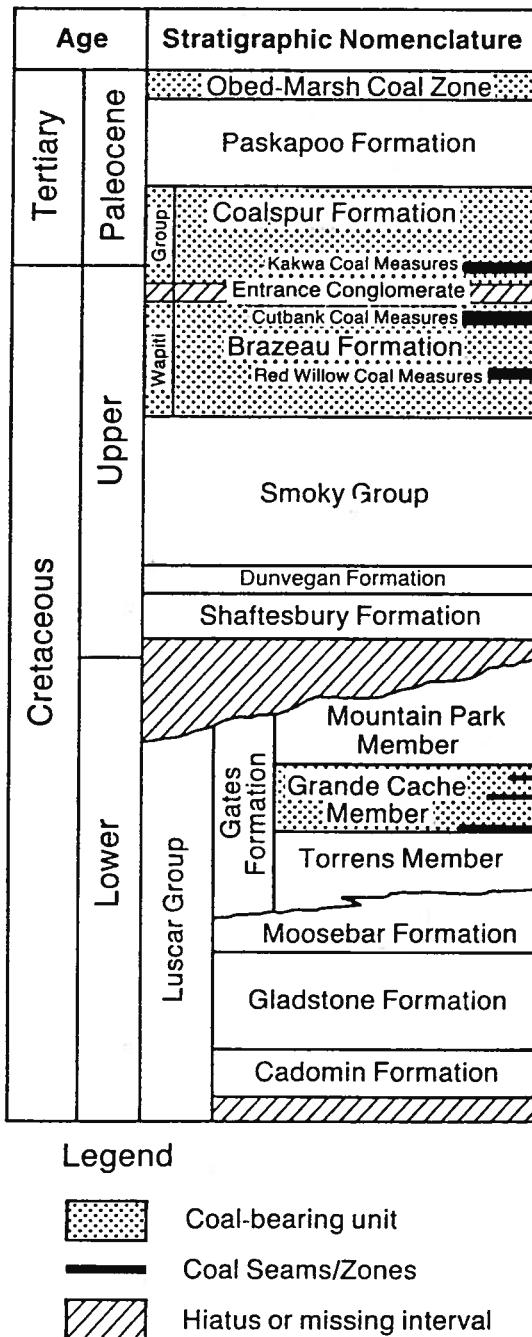

The strata of the Wapiti Group have been divided into four formations (McMechan and Dawson 1990)

- o Lower Brazeau
- o Upper Brazeau; contains the sequence informally defined as the Cutbank coal measure
- o Lower Coalspur
- o Upper Coalspur; contains the sequence informally defined as the Kakwa coal measure.

Upper Brazeau Formation

Coal occurrences within the Cutbank coal measure of the Upper Brazeau Formation have, within the mapsheet, been documented from a limited number of oil and gas wells. Within the CCP mapsheet 83L/7, the Cutbank coal measure have an average thickness of 190+ meters. The (up

**Figure 2. Stratigraphic Nomenclature Adopted for the Coal Compilation Project
(after Macdonald et al 1989; and Dawson et al 1989 & 1990)**

to) seven coal seams vary in both thickness and continuity, and have an average aggregate thickness of 5.5 meters. Seam correlations are preliminary.

Upper Coalspur Formation

Coal occurrences within the Kakwa coal measure of the Upper Coalspur Formation have, within the mapsheet, been documented in outcrops, trenches, coal drillholes and a number of oil and gas wells. Within the CCP mapsheet 83L/7, the Kakwa coal measure have an average thickness of 130 meters. The (up to) ten coal seams vary in both thickness and continuity, and have an average aggregate thickness of 7.5 meters. Locally, individual coal zones of the Kakwa coal measure thicken to 4.8 meters. Seam correlations are preliminary.

Structure

The axis of the Alberta Syncline, trending northwest/southeast, is located near the northeast corner of the mapsheet.

Most of the mapsheet area is located on the southwest limb of the Alberta Syncline; the strata have shallow dips, usually between 0 and 15 degrees toward the northeast. Strata, on the northeast limb of the Alberta Syncline, have shallow dips in a southwesterly direction.

Environmental Setting

Integrated Resource Plans (IRP's)

Within the mapsheet, there are no IRP's, either completed or in-progress.

Except for a small area in the southeastern part of the CCP mapsheet, 83L/7 is located within the 'proposed_for_the_future' Kakwa-Wapiti IRP. The southeastern part of the mapsheet is located, in part, south of the Smoky River. The area south of the Smoky River is part of the Smoky-Simonette IRP. Its status is also 'proposed_for_the_future'.

See also Figure 3 for locations/outlines of IRP's in the surrounding vicinity. On Figure 3, a bracketed letter trails the name of the IRP; this letter identifies the status of the IRP as

- o (C); completed

- o (P); in-progress or
- o (F); future.

Resource Management

Coal Dispositions

The status of the rights_to_coal within an area can generally be categorized into one of the following

- o Crown coal lease
- o Crown coal lease under application
- o Areas with registered right of first refusal
- o Freehold coal rights
- o Coal withdrawn from disposition.

According to a Alberta Energy Coal Disposition Map which includes 83L7 (1989-05-09 version), the following 4 companies/individuals are/were involved in one or more of the above activities

- o Amoco Canada Resources Ltd.
- o Consolidation Coal Company of Canada Limited
- o Esso Resources Canada Limited
- o Seaton-Jordan & Associates Ltd.

It should be noted that, for the mapsheet, the corporate coal lease activities consisted of only the 'Crown coal lease' and 'Crown coal lease under application' categories.

Large tracts of coal lease applications, originated by Amoco Canada Resources Ltd. and Seaton-Jordan & Associates Ltd., have been recently withdrawn; ie, these two companies now have no coal lease activity within the mapsheet area. These recent application withdrawals have been

reflected on the Coal Dispositions 'snapshot' map located on the enclosed ALBERTA RESEARCH COUNCIL MAP RCM7. Only Consolidation Coal Company of Canada Limited (Crown coal lease and coal lease application) and Esso Resources Canada Limited (Crown coal lease and coal lease application) have coal interests within the mapsheet area.

Established Coal Resources and Reserves

Coal resources and/or reserves have been calculated by the ERCB (1989) for the whole of Alberta. The CCP mapsheet 83L/7 contains, in part, the

- o Musreau Lake Coal Field; part of the ERCB-designated 'Plains Region'; the Coal Field is divided into three separate deposits (North, Amundson and Kakwa Tower).

The Coal Field outline has been shown on the the GIS plot

Exploration History

Coal

Coal Exploration Drillholes

Some 146 coal exploration holes³ have been drilled by 5 companies between 1967 and 1987. Based on data stored in the AGS Coal Database, 123 holes (84%) contained coal intersections; it follows that 23 holes (16%) did not intersect coal. Hole depths ranged from less than 5 to 103 meters in depth.

Coal exploration drilling activities were carried out by a number of corporate entities. A summary follows

³Information, concerning coal exploration drillholes, is based on the AGS Coal Database, April, 1989 version of the ERCB Coal Hole File. It is planned, in the next fiscal year, to upgrade the AGS Coal Database with the April, 1991 version of the ERCB Coal Hole File.

<u>Company</u>	<u>Number of Holes Drilled</u>
Alberta Research Council	18
C. Warren Hunt Explorations Ltd.	4
Consolidation Coal Company of Canada Limited	54
Esso Resources Canada Limited	61
Hudbay Coal Company	9

Based on the April, 1989 version of the ERCB Coal Hole File, details of the coal exploration drillhole are given in Appendix 1 and includes information on:

- o SITID; the assigned Site Identification Number within the AGS Coal Database
- o CAT_ID; the assigned Catalogue Identification Number within the ERCB Coal Hole File (April, 1989 version)
- o ORIG; the Original Identification Number of the Datapoint (ie, drillhole number)
- o EDITED; within the ERCB Coal Hole File, the equivalent to ORIG has been limited to 6 spaces; this, in some cases, has not been sufficient to record the ORIGinal corporate assigned drillhole number; within the AGS Coal Database, ORIG has been allocated 11 spaces; a 'X' in the EDITED column identifies those drillholes whose ORIG's were truncated; drillholes listed in the ORIG column of the listing have been edited and now reflect the 'true' Original Identification Numbers
- o NCinDH; a 'NC' in the column indicates that there were no coal intersections, for the drillhole, contained within the AGS Coal Database
- o M; Meridian
- o T; Township
- o R; Range
- o S; Section

- o RSEC; Reference Section
- o RCNR; Reference Corner
- o METN; Meters north or south from the reference corner
- o METE; meters east or west from the reference corner
- o ELEV; Ground or surface elevation of the datapoint (drillhole)
- o TD; Total depth of drillhole reported in meters
- o CORPNUM; the assigned Corporation Number within the AGS Coal Database
- o CPDT; completion date of the datapoint (drillhole); date coded as yyymmdd
- o COMPANY; identifies the company that generated the datapoint (drillhole).

Coal Exploration Trenches/Hand Trenches

Between 1988 and 1990, Dawson of the GSC/ISPG conducted a series of field mapping programs in the Wapiti area of northwestern Alberta. The programs were executed, in part, on the mapsheet 83L/7. Two hand-dug trenches were excavated to expose coal seams, of the Kakwa coal measure, within the mapsheet area.

Trench locations have been shown on the GIS plot.

Appendix 2 contains copies of the trench logs, plus additional information concerning Dawson's field mapping programs in the Wapiti area.

Oil and Gas Wells

The CCP mapsheet 83L/7 contains, in part, two major oil fields (the Kakwa and Red Rock Fields) and two gas fields (the Chicken and the Musreau Fields). Outlines, of the Fields, have been indicated on the GIS plot.

In establishing the above noted fields, 157 oil and gas wells have been drilled within the mapsheet area. Of the wells drilled,

- o 25 are suspended

- o 15 are suspended oil wells
- o 10 are suspended gas wells
- o 16 have been abandoned
- o 1 is an abandoned gas well
- o 1 is an abandoned oil well
- o 18 are capped gaswells
- o 1 well is standing
- o 12 are flowing gas wells
- o 53 are flowing oilwells
- o 5 are pumping oilwells.

See Appendix 3 for additional data. The Appendix is based on queries from the ERCB oil and gas database (April, 1989 version).

Oil and gas well locations have been identified on the GIS plot. Drilling activity has been further summarized in the following table

<u>Field Name</u>	<u>Number of Oil/Gas Wells Drilled</u>
Chicken (Gas) Field	12
Kakwa (Oil) Field	104
Musreau (Gas) Field	8
Red Rock (Oil) Field	9
Outside of the above noted Oil/Gas Fields	24

Coal Occurrences

Coal Exploration Drillholes

On both Appendix 1 and the map, coal exploration drillholes have been identified as either

- o coal thicker than 0.5m intersected in the drillhole

or

- o no coal thicker than 0.5m intersected in the drillhole.

Coal is defined as greater than 50% carbonaceous material by weight and more than 70% carbonaceous material by volume as estimated from geophysical logs. The exclusion of coal seams thinner than 0.5m is consistent with Hughes et al. (1988), who exclude seams thinner than 0.5m in resource determination.

Coal intersections, per coal exploration drillhole, have been included in Appendix 4. The listing includes

- o SITID; the AGS Coal Database identification number
- o CAT_ID; the ERCB catalogue identification number
- o ORIG; the original company-assigned drillhole number
- o M T R S ; Dominion Land Survey (DLS) information; ie, Meridian, Township, Range and Section
- o TOP DEPTH; depth to top of coal in meters
- o BOT DEPTH; depth to bottom of coal in meters
- o THICK; thickness of the coal seam in meters
- o SEAM; the ERCB_Designated Coal Seam Name/Number (if assigned/known); a '0' indicates that the seam has not been correlated

- o MIN; Mineral Matter content of the coal (often a best-estimate from geophysical log interpretation); a '0' indicates that the mineral matter of the coal was not available and/or not derived
- o REGOLITH; thickness, in meters, of the regolith
- o PIKNUM; the geological pick identification number as stored in the AGS Coal Database
- o REMARKS.

Appendix 5 provides additional information concerning past Alberta Research Council coal exploration drill programs in the Wapiti area. The drill programs, conducted primarily during 1966 and 1967, were executed, in part, within the CCP mapsheet 83L/7.

Coal Exploration Trenches/Hand Trenches

Two hand-dug trenches were excavated, by Dawson of the GSC/ISPG, to expose the Kakwa coal measure contained within the mapsheet 83L/7. Trench locations have been shown on the GIS plot. Trench logs are contained in Appendix 2.

Individual coal seams exposed within the trenches vary in thickness from >1 to 1.9 meters.

Coal Outcrops

Numerous coal outcrops and/or coal seam traces have been documented within the mapsheet 83L/7 by

- o ARC/AGS
- o Esso Canada Resources Limited
- o GSC/ISPG
- o Union Oil Company of Canada Limited.

Coal outcrop locations and/or coal seam traces have been identified on the GIS plot. Coal seam outcrops are limited to the Kakwa coal measure and vary in thickness to 4.7 meters.

Coal Quality Summary

Coal Rank

Within the mapsheet 83L/7, coals of both the Cutbank and Kakwa coal measures have a rank of high volatile bituminous C to sub-bituminous B.

Coal Exploration Drillholes

Eighteen coal exploration drillholes, within the mapsheet 83L/7, contain coal quality information. Coal quality data generated, from the 101 samples, includes

- o 80 Proximate Analysis (as-received basis (arb)) from 18 drillholes
- o 91 Proximate Analysis (air-dried basis (adb)) from 15 drillholes
- o 74 Sulphur analysis (adb) from 15 drillholes
- o 80 Heating Value determinations (arb) from 18 drillholes
- o 83 Heating Value determinations (adb) from 15 drillholes
- o 19 samples of Ash Analysis (Na_2O & K_2O only) from 8 drillholes
- o 6 samples of Ash Fusibility (completeness varies) from 4 drillholes
- o 12 samples of Equilibrium Moisture from 3 drillholes
- o 17 samples of Hardgrove Grindability Index (HGI) determinations from 9 drillholes
- o 17 Specific Gravity samples from 9 drillholes.

Coal Exploration Trench/Hand Trench Data

From 1988 to 1990, Dawson of the GSC/ISPG conducted a field mapping program to evaluate the Kakwa coal measure contained, in part, within the mapsheet 83L/7. Two hand-dug, coal trenches were sampled. Samples were analyzed for proximate analyses, sulphur, heating value and vitrinite reflectance.

The analytical data are presented on the trench logs contained within Appendix 2. Trench site locations have been presented on RCM7.

Coal Outcrops

A number of outcrops, within the mapsheet 83L/7, have been sampled by both Crown and private corporations

- o ARC/AGS, 1969; from 1 coal outcrop, sample results include Proximate Analysis and Heating Value determinations
- o Esso Canada Resources Limited, 1982 to 1985; 9 coal samples were analyzed for palynology; one of the coal samples was also subjected to petrographic analysis; an additional 10 non-coal outcrops, were also analyzed for palynology
- o Union Oil Company of Canada Limited, 1980; from 4 coal outcrops, sample results include Proximate Analysis, Sulphur, Heating Value and Equilibrium Moisture and palynology determinations; an additional 3 coal samples⁴ were analyzed for palynology only.

Coal Resource Development Potential

A semiquantitative and subjective evaluation of the potential of coal development in the map area is based on limited data. It is based on mainly geological criteria and does not take into account governmental restrictions on coal development or evaluate actual economic constraints to development now or in the future. The three criteria that have been used are Coal Potential, Mining Potential, and Data Availability (discussed in more detail below). Areas in Green on the companion map (thematic inset 'Coal Development Potential') reflect higher level of knowledge and potential for development of coal than the blue (medium) or red areas (low). Areas rated in blue indicate more information is needed to determine the coal development potential. Areas colored red indicate some potential for development. The remaining uncolored areas have no data available often because the coal, if present, is at depth under non coal-bearing rocks.

Coal Potential

Resources

The amount of data is too small for a quantitative evaluation of coal resources.

⁴Actual palynology results are not available. Only locational data is available for these latter 3 samples.

Coal Quality

Very little coal quality data is available but where test results are present the potential of the coal for development is strengthened. In general where a sample has been collected and analyzed the coal has an inherent development potential.

Mining Potential

Overburden

An evaluation of overburden for surface mining and depth for underground mining has been made. (The 'Mining Potential' criteria did not take into account governmental restrictions on coal development or evaluate actual economic constraints to development now or in the future.)

Geotechnical

Geotechnical considerations included an evaluation of structural setting. Consideration was given to infrastructural concerns related to site, environment and potential mining problems.

Data Availability

Little coal data is available for the entire map area but where present the potential of the coal for development is strengthened. In general, where an outcrop, drillhole, trench or sample is present the coal has an increased development potential. Some value was given to areas containing sediments that typically include coal.

Future Work

In general, from a coal resource/exploration point of view, the map area has been only superficially examined. Additional coal exploration and coal quality data needs to be collected throughout the map area.

The coal-bearing Luscar Group, while not present in surface exposures, occurs at depth. Within the mapsheet, the Luscar Group is intersected, in the subsurface, in the 2400 to 3500 meter_deep range. If depth of burial is not a deterrent, the presence of (thick ?) coals of low to medium volatile bituminous rank could indicate the area has potential for coalbed methane. The entire area of the accompanying map, RCM7, contains Luscar sediments at depth. Additional

work is required to establish and evaluate coalbed methane resource potential of the Luscar Group in the area.

The mapsheet contains coals of the Cutbank and the Kakwa coal measures of the Wapiti Group. These coals should also be considered for their coalbed methane potential. The coals have a rank of high volatile bituminous C to sub-bituminous B. Coalbed methane potential, while (probably) not as high as the Luscar Group coals, should not be excluded.

Based on existing data, potential surface-mineable coal resources may be contained within the Kakwa coal measure. Additional mapping and mechanical exploration programs are required to establish and quantify both coal quantity and quality.

For most of the remaining map area, little data is available and the coal development potential is somewhat uncertain.

Appendix 2. 83L/7 - GSC/ISPG (Dawson) Coal Trench Data from the Wapiti Project

Between 1988 and 1990, Dawson of the GSC/ISPG excavated, described and sampled a number of coal outcrops and hand-dug trenches in the Wapiti area of northwestern Alberta.

Copies of thirty three trench logs have been provided to the Alberta Geological Survey (AGS) for use, as required, in the Coal Compilation Project (CCP). Said trenches have been distributed over a large area (specifically, within NTS mapsheets 83K, 83L and 83M). The following table provides summary data concerning the trench logs; it should also be noted that many of the trenches are located outside of the coverage of the CCP for 1990/91. An 'X' in the 'CQ' column indicates that coal quality data has also been included on the trench log.

<u>Trench Designation</u>	<u>Formation</u>	<u>Coal Measure</u>	<u>NTS Mapsheet</u>	<u>CQ</u>	<u>Applicable to CCP 1990/91</u>

Appendix 4. 83L/7 - Coal Intersections of the Coal Drillholes

 CURRENT FILE NAME: [COALREG.90]83L7_PX.DAT
 ORIGINAL FILENAME: [COALREG.90]P83L7.DAT
 MAPSHEET: NTS 83L/7

NOTE: Geology picks have been modified from the AGS Coal Database, April, 1989 version of ERCB Coal Hole File.
 See GSC Paper 88-21 (Hughes, Mudry & Nikols) for the details of criteria.

Appendix 5. 83L/7 - Alberta Research Council - Coal Exploration Programs in the Wapiti Area

During 1966 and 1967, the Research Council of Alberta (RCA) conducted a reconnaissance coal exploration drill program in the Wapiti area. In total, 180 holes were drilled. Geological data, generated from the program, was limited to drillers' and geologists' sample descriptions, with some electrical logs (SP and Resistivity). In general, the electrical logs were of poor resolution.

Of the above 180 drillholes, 17 (including 2 'redrilled' sites) were located within the NTS mapsheet 83L/7. Drillhole strip logs, generated from the Logger software package, are available for most drillholes and are contained as part of this Appendix. Strip logs were not generated for the two drillholes, SP82-67 and SP70A-67. Note that elevations, total depths and depth intervals have been presented in Imperial length (feet). Drillhole locations can be derived from the numeric string indicated on the strip log. From left to right, digit(s) position(s)

- o 1 identifies the Meridian
- o 2, 3 and 4 identify the Township
- o 5 and 6 identify the Range
- o 7 and 8 identify the Section
- o 9 and 10 identify the Legal Sub-Division (if recorded).

The coal lithology infilled on the strip log has been biased and tends to 'visually' exaggerate the actual amount of coal present; ie, if the word 'COAL' is part of the lithological description, the strip log indicates the entire interval is 'all-coal'. In reality, the actual amount of coal present may and, usually is, quite insignificant (eg,...'with a few pieces of COAL.')

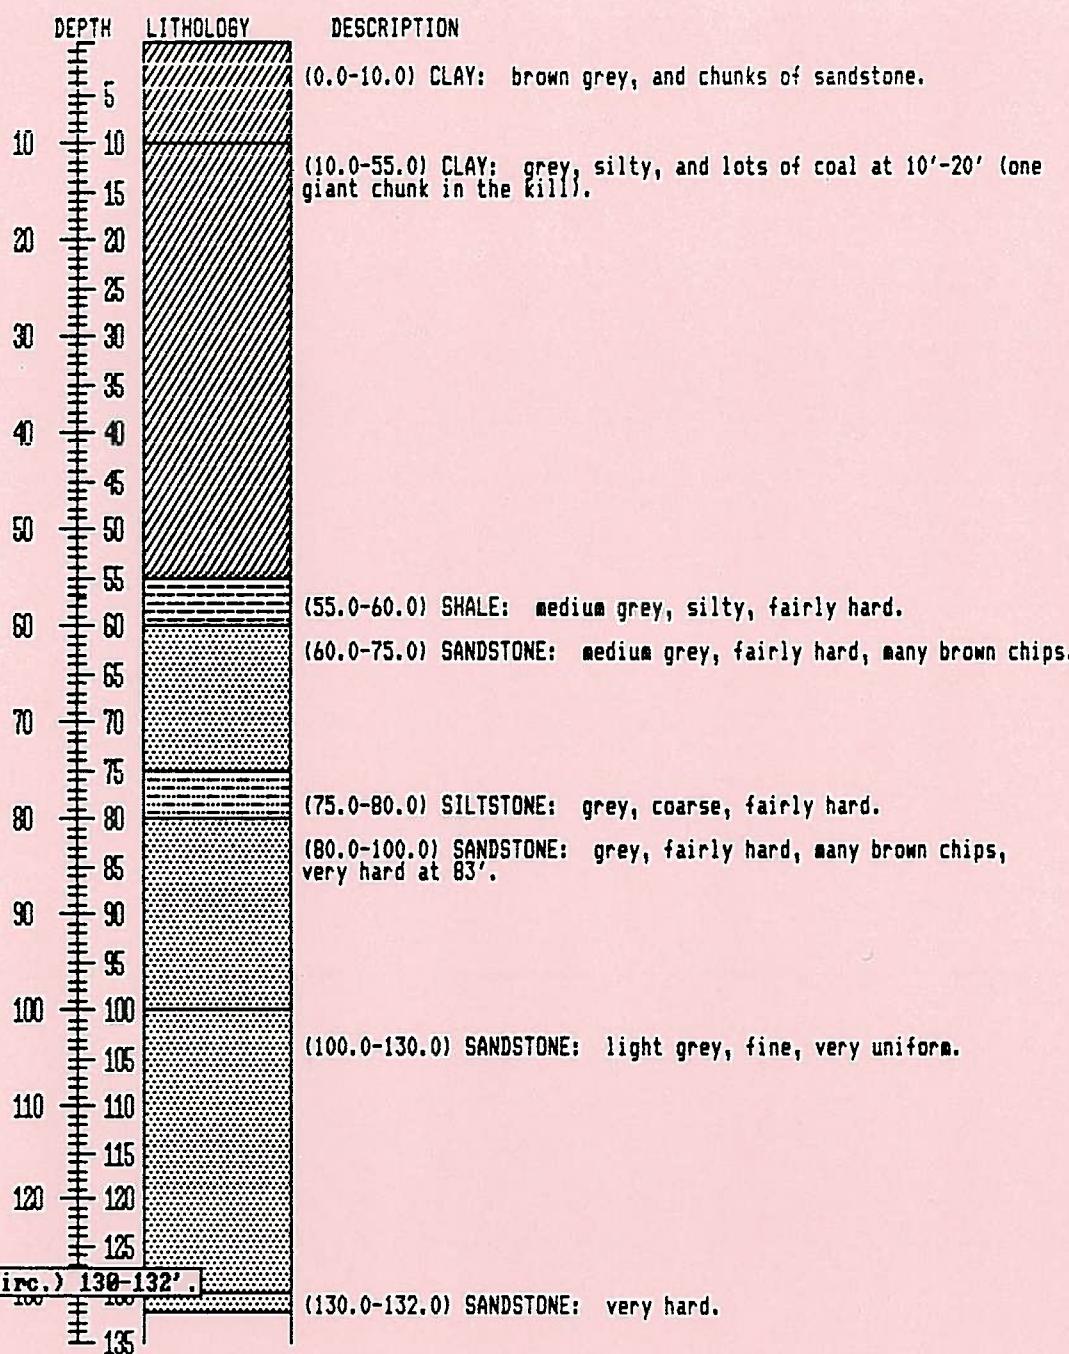

The RCA, in 1977, drilled one additional (coal?) drillhole within the mapsheet area. The drillhole, 1-77, was part of a Grande_Prairie_Area drill program.

HOLE ID	LOCATION	ELEVATION (in feet)	DEPTH (in feet)

NTS 83L/7 COAL DEVELOPMENT POTENTIAL *

* NOTE *
* Coal Development Potential is a measure of the subsurface evolution of the potential for coal development based on limited data and reflecting current knowledge. CAUTION SHOULD BE EMPLOYED IN THE USE OF THIS MAP. The potential is based on mainly geological criteria and does not take into account economic factors such as cost of development or evaluate actual economic constraints to development now or in the future. To obtain a detailed map for a unique set of criteria, please contact the AGS.
